

Turn an NDA into rules for the agent that handles that client's documents

Upload the NDA, check the rules it suggests, and apply the ones you want. Nothing changes in OpenBox until you press Apply.

Code and setup: <https://github.com/OpenBox-AI/openbox-policy-studio>

How to use it

1 Open the Studio

Whoever looks after the setup does this once: download the code from the link above, put the keys in a file called `.env` (the list is in the README), then run `uv run nda-web`. Then open `http://127.0.0.1:8010` in your browser.

2 Tell the Studio which agent to protect (once per client)

An NDA never names your agent or your folders, so each client has a small settings file called a **binding**. It says **which agent the rules go on** and **which folder holds that client's documents**.

- **Client already set up?** Pick it from the **Firm** menu at the top.
- **New client?** Click **Create firm from a contract** and upload their contract. Then set the two things only you know: **Agent these policies apply to** (pick your agent from the list) and **Folder holding the firm's material** (for example `0005/70001/`). Click **Create firm and compile**.

Agent not in the list? It must first be registered in the OpenBox dashboard under **Agents**, in the same organisation as the Studio's key. The README explains bindings in full, including your agent's tool names.

3 Upload the NDA

Click **Upload an NDA** and choose the file: PDF, Word or Markdown. In about ten seconds you see the **Proposed policy rules**, each with the clause it came from.

4 Check the rules, then apply

Read each rule next to its clause. Tick the ones you agree with and click **Apply to OpenBox**. Each rule is tested before it is switched on, and appears under **Enforced on OpenBox**.

Click **Open in OpenBox**: you should land on **your** agent's Policies tab. If the rules are on a different agent, fix the agent in the client's binding and apply again.

What the rules do

BLOCK The agent is stopped.	REQUIRE_APPROVAL The agent waits until someone approves it in OpenBox.	HALT The agent is stopped and its whole run ends.	Sandbox The agent may go ahead, but only inside the sandbox.
---------------------------------------	--	---	--

Good to know

- **Always read before you apply.** The Studio gets the right rules for about 9 in 10 NDAs. A person checking each rule is part of the process.
- **Rules marked "Needs review"** are ones the Studio is unsure about. Look at these first.
- **Some clauses never become rules**, such as how long the NDA lasts, returning documents, or which law applies. That is expected: they can't be checked on the agent's actions.
- **Uploading the same NDA again is safe.** Rules already in place are left as they are; changed ones are updated, not duplicated.
- **Wrong client, agent or folder?** Fix the client's binding first, then upload the NDA again.
